Safety Technique

SAFEMASTER
Emergency Stop Monitor
BH 5922, BL 5922

CANopen · **DOLD**

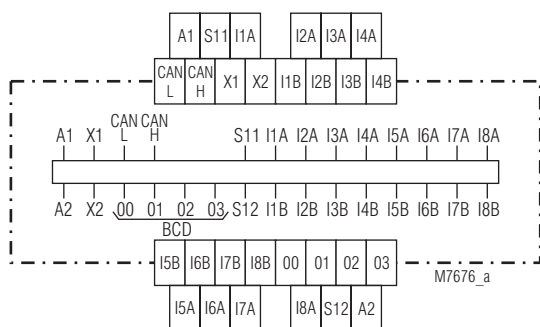

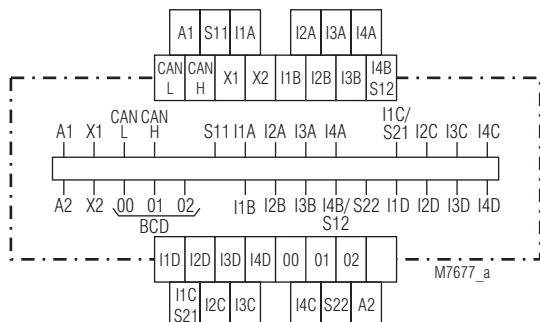

BH 5922   BL 5922

- To monitor max. 16 single-channel e-stop buttons or 8 2-channel e-stop buttons
- E-stop button can be connected directly to BH 5922
- Simple wiring of e-stop buttons
- Extendable in steps of 8 e.g. 16 inputs
- No influence on e-stop system
- Adjustable
  - with manual reset (without link X1 / X2)
  - with automatic reset (with link X1 / X2)
- Reset button and remote reset
- LED indicators to show the state of the e-stop buttons
- As option direct connection of 2-channel e-stop buttons to BH 5922 / BL 5922
- As option with BCD output (high or low active) or CANopen
- As option with CANopen according to DS301 version 3.0
- BH 5922: width 45 mm
  BL 5922: width 90 mm

Circuit Diagrams

E-stop button 2-channel connection, 2-channel reset for systems without cross fault monitoring (8 inputs)
BL 5922.08/02_, BL 5922.08/12

Connection Terminals

Terminal designation	Signal description
A1+, A2	Supply voltage
X1, X2	Remote reset channel 1
X3, X4	Remote reset channel 2
I1A ... I16A, I1B ... I16B	Inputs for e-stop button channel 1
I1C ... I8C, I1D ... I8D	Inputs for e-stop button channel 2
S11, S12	Inputs for e-stop loop channel 1
S21, S22	Inputs for e-stop loop channel 2
O0, O1, O2, O3 BCD A-B	Semiconductor state outputs for channel 1
O0, O1, O2, O3 BCD C-D	Semiconductor state outputs for channel 2
CAN L, CAN H	CAN-Bus

Indicators

green LED „ON": on, when supply connected
(at B_ 5922/0_ _, B_ 5922/1_ _ only)

yellow LED: on, when bus active
(only with variants with fieldbus)

green status LEDs: Continuous:
when all e-stop buttons are closed

Off:
when corresponding e-stop button is pressed

Flashing of one status LED only when:
- manual reset and
- released e-stop buttons and
- signal not reset
  Reset can be made with button on front or with remote reset-button.

Flashing of all status LEDs:
The input S11 of the e-stop monitor is not connected. A reason could be a broken wire between this terminal and S11 of the e-stop module. When several e-stop monitors are connected in series this status also occurs when the previous shows an activated e-stop button.

Applications

Indication of the status of e-stop buttons in an e-stop chain. We recommend to use the BH 5922 together with DOLD E-stop modules (approval).

Function

If all the e-stop buttons are closed all green LEDs are on. If one button is activated the corresponding LED goes off.

The e-stop buttons are connected in series, therefore only one LED goes off even if several buttons are pressed. Only the first activated button in the row is indicated. When this e-stop button is released again the LED lights up again and the LED of the next activated button in the row goes off.

If the variant B_ 5922/0_2, B_ 5922/0_4, B_ 5922/0_5, B_ 5922/1_2, B_ 5922/1_4, B_5922/1_5 is connected to a IP 5503 in Plug and Play modus the outputs show the state of the E-stop buttons and the LEDs the state of the status LEDs I1 - I8 on the e-stop monitor.

Notes

Info When using B_ 5922/00_ or B_ 5922/01_ for single channel monitoring or 2-channel connection of the e-stop chain the e-stop monitor has to be conected to the loop between S11 and S12 of the e-stop module. In this way channel AB is monitored.

Info In a 2-channel e-stop loop, the e-stop monitor has to be connected to the channel which normally is between the terminals S11 and S12 of the e-stop module. The E-stop monitor and the e-stop module have to be connected to the same DC 24 V power supply. When using an E-stop module with AC-supply the minus-terminal of the e-stop monitor (A2) must be connected to the minus-terminal of the e-stop control voltage (S21 or PE) on the e-stop module.

Info The product is not a safety component. The use of proven components and proven safety principles in conjunction with Dold emergency stop modules means that the emergency stop chain will not be affected.

CANopen mode (B_ 5922 /0_ _, B_ 5922/1_ _)
With switch position "CANopen" the CANopen protocol is active on the interface. The configuration is made with the programming software PN 5501 in conjunction with minimaster IL 5504 / IN 5504 or e.g. with ProCANopen. The corresponding configuration file on CD can be ordered under order no. PN 5501, article no. 0052860

Plug and Play mode (B_ 5922 /0_ _, B_ 5922/1_ _)
With switch position "Plug and Play" a variant of the CANopen protocol is active on the interface. The unit setting is done with a switch on the front, see picture below. If a system is on plug and play mode it can be switched over to CANopen protocol at any time.

Address setting Plug and Play mode
To allow the E-stop monitor to communicate with a corresponding device via the CAN-bus the addresses have to be set with the 2 rotational switches on the front according to the table below. Adresses between 1...49, 51...99 are possible. Adress 0 and 50 cannot be chosen in Plug and Play mode.

E-stop monitor BH/BL 5922 with address	transmits to	output module IP 5503 with address
1	→	51
.		.
.		.
49	→	99

|	
Example of setting:	Address 14
left switch 10^1:	to position 1 x 10^1
right switch 10^0:	to position 4 x 10^0

Notes for Plug and Play mode
On the BL-models with 2-channel monitoring of the e-stop loop 2 addressees and 2 transmission rates can be chosen (channel AB and channel CD). For correct operation the adress settings must be different and the transmisson rate settings must be the same.
The screen of the bus wire has to be connected to A2 of the e-stop monitor.

Set-up procedure
1.) Connect CAN-bus to terminals CAN_L and CAN_H
2.) Terminate the physical end of the bus by connecting a termination resistor of 120 Ω between CAN_L and CAN_H on the first and last module of the bus
3.) Connect screen of bus wire to A2
4.) Select transmission rate (e.g. 20 K bit/sec) using the rotational switch on the front (see drawing)
5.) Select address of the module using rotational switches on the front (see drawing and above example)

Attention:
- To communicate in a system configured for Plug and Play modus it is necessary to connect one BH/BL 5922 with adress 1 to the CAN-bus.
- The device adress, the transmission rate and the change of operating mode between CANopen and Plug and Play will only be accepted when the device is powered up.

M6316
The CANopen transmit PDO has follow structure:

Read8Inputs	Read8Inputs_old	Status8Inputs	Saved8Inputs	Dummy1	Dummy2	Dummy3	Device_ID

The bytes in the data string have the following content:

Read8Inputs: State of the e-stop buttons
Bit x = 0   e-stop button
Bit x = 1   e-stop button not active

Read8Inputs_old: State of e-stop button at time t-1. The designation of the bits is the same as with Read8Inputs

Saved8Inputs: Latched state of the e-stop buttons, if the e-stop monitor is operated in manual reset mode.
To detect that the manual reset mode is selected bit 1 in byte Status8Inputs can be used.

Status8Inputs: Actual state of e-stop monitor
Bit 0 = 1   One e-stop button is activated
Bit 1 = 1   E-stop monitor aperated in manual reset mode
Bit 2 = 1   The e-stop monitor was acknowledgement (activation of reset button or remote reset)
Bit 3 = 1   At the beginning of the e-stop loop (terminal S11 or S21) the correct voltage is present. If bit 3 is 0 then the wire between e-stop modul and e-stop monitor is interrupted.

Device_ID: Device Id = 0 x 0 C   E-stop monitor for connection of 4 e-stop buttons (.04)
Device Id = 0 X 0 D   E-stop monitor for connection of 8 e-stop buttons (.08)

Dummy 1-3:   not used Bytes

Possible state of the bytes depending on the activation of the e-stop buttons:

Mode	actuation	active			not active			reset		
		E*	ST*	SP	E*	ST*	SP	E*	ST*	SP

0 = voltage on output:	0 V
1 = voltage on output:	24 V

CANopen interface (B_5922/0_ _, B_5922/1_ _)

B_5922/1_ _:	according to ISO 11 898-1, galvanic separation
wiring:	screened twisted pair
transmission rate:	settable 20 K bit/s, 125 K bit/s, 500 K bit/s, 1 M bit/s,
max. length:	20 K bit/s = 2500 m
	125 K bit/s = 500 m
	500 K bit/s = 100 m
	1 M bit/s = 25 m

Plug and Play

transmission rate:	20 K bit / sec (recommended)

Info Both physical ends of the 2-wire system must be terminated with a 120 Ω resistor between the terminals CAN_L and CAN_H.

Input

Nominal voltage U_N (A1/A2):	DC 24 V
Voltage range:	0,8 ... 1,1 U_N
Control voltage on S11/S12:	DC 24 V
Reset input X_1, X_2:	Voltfree contact
BCD interface:	
Output (O0,O1,O2, O3):	Transistor switching +
switched /auxiliary voltage:	DC 24 V
Switching capacity:	40 mA short circuit proof
Residual voltage:	typ. 0,6 V

General Data

Operating mode:	Continuous operation
Temperature range:	
Operation:	- 20 ... + 60 °C
Storage:	- 40 ... + 70 °C
Altitude:	< 2.000 m
EMC	
Electrostatic discharge:	8 kV (air) IEC/EN 61 000-4-2
Surge proof against wire bound surges, induced by high frequency fields:	10 V class 3, f = 150 kHz - 80 MHz IEC/EN 61 000-4-6
Fast transients:	2 kV IEC/EN 61 000-4-4
Surge voltages between	
wires for power supply:	1 kV IEC/EN 61 000-4-5
between wire and ground:	2 kV IEC/EN 61 000-4-5
Interference suppression:	Limit value class A*)

*) The device is designed for the usage under industrial conditions (Class A, EN 55011).
When connected to a low voltage public system (Class B, EN 55011) radio interference can be generated.
To avoid this, appropriate measures have to be taken.

Degree of protection	
Housing:	IP 40 IEC/EN 60 529
Terminals:	IP 20 IEC/EN 60 529
Housing:	Thermoplastic with V0-behaviour to UL subject 94
Vibration resistance:	Amplitude 0,35 mm IEC/EN 60 068-2-6 frequency 10 ... 55 Hz
Climate resistance:	20 / 060 / 04 IEC/EN 60 068-1
Terminal designation:	EN 50 005
Wire connection:	1 x 4 mm² solid or 1 x 2,5 mm² stranded ferruled or 2 x 1,5 mm² stranded ferruled DIN 46 228-1/-2/-3/-4 or 2 x 2,5 mm² stranded ferruled DIN 46 228-1/-2/-3
Wire fixing:	Terminal screws M3.5, box terminals with wire protection
Mounting:	DIN rail IEC/EN 60 715
Weight:	
BH 5922:	approx. 255 g
BL 5922:	approx. 470 g

Dimensions

Width x height x depth:	
BH 5922:	45 x 86 x 121 mm
BL 5922:	90 x 86 x 121 mm

Standard Type

BH 5922.08 DC 24 V
Article number: 0052427
- for 8 e-stop-buttons, single channel connection
- Nominal voltage U_N: DC 24 V
- Width: 45 mm

BL 5922.08/010 DC 24 V
Article number: 0052430
- for 8 e-stop buttons, 2-channel connection
- Nominal voltage U_N: DC 24 V
- BH 5922:   45 mm width
 BL 5922:   90 mm width
